                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               à
                                                                                                                                                                                                    The invention relates to a neutrokine-alpha protein in crystalline form. The crystalline neutrokine-alpha protein is useful for designing molecules that have biological activity or compounds that bind, inhibit or minic a neutrokine-alpha protein and/or enhance the activity of a neutrokine-alpha protein. The three-dimensional structure of a neutrokine-alpha protein. The three-dimensional structure of a neutrokine-alpha protein and their homologs. The compounds that minic, prevent or inhibit the activity of the protein are useful for treating cancer, allergic disorders, or autoimmune diseases such as rheumatoid arthritis, multiple sclenosis, Crohn's disease, diabetes, systemic lupus erythematosus or asthma. This sequence represents the human TRAIL protein amino acids 119-281 which is used in the invention for comparison to the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated polypeptide (I) comprising a canine or feline TNF-related apoptosis-inducing ligand (TRAIL) sequence and optionally a fusion peptide fused to the polypeptide. Modulators of (I) are useful for treating an apoptosis-related disorder in a subject. The apoptosis-related disorder is chosen from cancer, neurodegenerative disease, lupus erythematosus, rheumatoid arthritis and multiple sclerosis. (I) is useful for diagnostic evaluation, genetic testing and/or prognosis of angiogenesis-related disorders, such as cancer. This sequence represents a gene encoding a cat soluble TRAIL protein used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                                                                                                                  Novel isolated canine or feline TNF-related apoptosis-inducing ligand polypeptide, useful for diagnostic evaluation, genetic testing and/or prognosis of angiogenesis-related disorders, such as cancer.

Novel isolated canine or feline TNF-related apoptosis-inducing ligand polypeptide, useful for diagnostic evaluation, genetic testing and/or prognosis of angiogenesis-related disorders, such as cancer.
XX
Disclosure; SEQ ID NO 31; 151pp; English.
XX
CC
The invention relates to an isolated polypeptide (I) comprising a canine or feline TNF-related apoptosis-inducing ligand (TRAL) sequence and optionally a fusion peptide fused to the polypeptide. Modulators of (I) are useful for treating an apoptosis-related disorder in subject. The apoptosis-related disorder is chosen from cancer, neurodegenerative clasease, lupus erythematosus, rheumatoid arthritis and multiple classes. In useful for diagnostic evaluation, generic testing sequence represents a gene encoding a cat TRALL protein with a V5-His Tag XX

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 7833, Application US/09513999C

Patent No. 6783961

GENERAL INFORMATION:
APPLICANT: Dumas Milne Edwards, J.B.
APPLICANT: Ducert, A.
TITLE OF INVENTION: Expressed Sequence Tags and Encoded Human Proteins.
FILE REPERENCE: 59.US2.REG
CURRENT APPLICATION NUMBER: US/09/513,999C
CURRENT PILING DATE: 2000-02-24
PRIOR FILING DATE: 1999-02-26
NUMBER OF SEQ ID NOS: 36681
SOFTWARE: Patent.pm
SEQ ID NO 7833
LENGTH: 121

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 1, Al

Sequence 3, Application US/09072993C
Patent No. 634638
GENERAL INFORMATION:
APPLICANT: Michael R. Brigham-Burke
APPLICANT: Peter R. Young
TITLE OF INVENTION: A METHOD OF IDENTIFYING AGONIST AND
TITLE OF INVENTION: A METHOD OF TUMOR NECROSIS RELATED RECEPTORS TR1 AND TR2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
